## Chemical Equation

Gives a description of a chemical reaction
Reactants $\rightarrow$ Products "yields" "produces"
Ex: $2 \mathrm{H}_{2}+\mathrm{O}_{2} \rightarrow 2 \mathrm{H}_{2} \mathrm{O}$

## Law of Conservation of Mass

Matter cannot be lost or gained in a chemical reaction
You must account for every atom

## Balance the Equation

Must represent the same number and kind of atoms on the left and right of the arrow

## Diatomic Molecules

Some elements exist in pairs when alone (not in a compound)
$\begin{array}{llllllll}\mathrm{H}_{2} & \mathrm{O}_{2} & \mathrm{~N}_{2} & \mathrm{~F}_{2} & \mathrm{Cl}_{2} & \mathrm{Br}_{2} & \mathrm{I}_{2} & \mathrm{At}_{2} \\ & & \text { (HON and the Halogens) }\end{array}$

$$
2 \mathrm{H}_{2}(\mathrm{~g})+\mathrm{O}_{2}(\mathrm{~g}) \rightarrow 2 \mathrm{H}_{2} \mathrm{O}(\mathrm{l})
$$

Coefficient Subscript
ratio of molecules in a reaction ratio of atoms in a molecule
Physical State
(s) or (c) = solid
(I) = liquid
(g) = gas
$(\mathrm{aq})=$ aqueous

Other Symbols

$$
\begin{array}{ccc}
\Delta=\text { heat applied } & \downarrow=\text { precipitate } & \uparrow=\text { gas } \\
\text { (above the arrow) } & \text { (after a product) } & \text { (after a product) }
\end{array}
$$

Ex: $\mathrm{CH}_{4}+\mathrm{O}_{2} \rightarrow \mathrm{CO}_{2}+\mathrm{H}_{2} \mathrm{O}$
Rules:
Subscripts cannot change
Coefficients change to balance

Must be able to count atoms in a formula:
Ex: $\left(\mathrm{NH}_{4}\right)_{3} \mathrm{PO}_{4} \quad 3-\mathrm{N} \quad 12-\mathrm{H} \quad 1-\mathrm{P} \quad 4-\mathrm{O}$

## - Technique Tip \#1:

Work with polyatomic ions as groups
$\underline{2} \mathrm{AgNO}_{3}+\ldots \mathrm{CaCl}_{2} \rightarrow \underline{2} \mathrm{AgCl}+\ldots \mathrm{Ca}\left(\mathrm{NO}_{3}\right)_{2}$

## - Technique Tip \#2:

If you notice one molecule is particularly larger than the others, start with it first

- Technique Tip \#3:

Use a pencil
